

ABSTRACT OF THE DISCLOSURE

A combustion-engined setting tool for driving fastening elements, such as nails, bolts, and the like in an object includes a combustion chamber (11), a piston guide (17) adjoining the combustion chamber (11), a drive piston (15) arranged in the piston guide (17) and displaceable in a setting direction under action of expanding gases produced in the combustion chamber (11) upon combustion of fuel, and an electrically driven device (5) for pre-compressing oxidation medium necessary for effecting a combustion process in the combustion chamber (11) and/or the fuel.
